

# BLUSHAN

## POST TAN CARE

**Do not allow your skin to come in contact with any liquid until your spray tan has fully set. This means no water, make-up, moisturizer, no sweating + no tears!**

**Original:** Sets in 12 hrs

**Express:** Sets in 4-6 hrs.

Golden + bronze please rinse in 4.5 hours unless you have naturally darker skin and did the violet shade & would like the color to get as deep as it can!

**Super Express:** Sets in 2-4 hrs

Golden + bronze please rinse in 2.5 hours unless you have naturally darker skin and did the violet shade & would like the color to get as deep as it can!!

Once your spray tan has set, shower in luke warm water to rinse off the cosmetic bronzers. Avoid bar soaps, ANY exfoliants + products not designed to be used with a spray tan. For best results use \*blushtan® Body Wash.

Also, yes, you can wash your hair after 24 hours

After your shower, apply a 'sunless-safe' moisturizer. For best results, use \*blushtan® Hydrating Moisturizer or Cerave. Hydrated skin will allow for longer lasting results + natural, even fading.

All solutions take a full day to develop. Please wait until 24 hours after your application to judge your results.

To extend the life of your tan, moisturize with a light tan extender. We recommend \*blushtan® Gradual Tanning Moisturizer.

### **Blush Clear solution:**

Unlike regular solutions, where the darkness level is dictated by the DHA per centage, the blushtan® clear results are determined by how long your clients wait until they shower. Rinse off just 2 hours after application for a light glow, 3 hours after for a medium tan, or 4 hours after for a deeper tan.

**PLEASE NOTE:** Although the tan sets more quickly on the skin, results still take 24 hours to develop so the client should not judge their results until the day following their application.

Shower after 2 hours – Compare to 8% DHA  
Shower after 3 hours – Compare to 10% DHA  
Shower after 4 hours – Compare 12% DHA  
Shower after 5 hours – Compare to 14% DHA

Everything we love about our Super Express Solution, without the bronzers + dyes!  
• no "fake tan" look pre shower • feels like nothing on the skin • even less transfer to sheets/clothing • the least overall ingredients

This solution will go on completely CLEAR. Results will gradually develop over the 12-24 hours following the application. The final color will depend on the client's natural skin tone, unlike the solutions that contain bronzer where we are also able to adjust the color based on their personal preference.

We especially love it for...

- breastfeeding moms
- clients with food dye allergies
- "lunch break" applications
- brides + anyone concerned about color transfer

Our exclusive line of organic blushtan® solutions contain natural, anti-aging ingredients that help to moisturize the skin + minimize the appearance of cellulite, fine lines + wrinkles. Will also reduce inflammation + redness caused by acne, sunburn, eczema + psoriasis. Specially designed to alleviate dry skin, allowing the sunless tan to set + fade evenly. Delivers a beautiful brown color designed to look flawless on all skin tones.
